Iterative Closest Point (ICP) Algorithm

# Task 1

1. Transform the following colors specified in the RGB model into the HSI format.
  1. (120, 80, 210)
  2. (0, 150, 130)
  
2. A robot observes at a pack of cereal in a windowless laboratory. Someone turns the light a little brighter.
  1. Do the R, G or B values of the cereal package change?
  2. Do the H, S or I values of the cereal package change?
  
3. The robot observes the pack in a kitchen with windows. Outside, a cloud pushes in front of the sun.
  1. Do the R, G or B values of the cereal package change?
  2. Do the H, S or I values of the cereal package change?

# HSI Color Representation

■ *Transform the following colors specified in the RGB model into the HSI format.*

RGB to HSI Transformation:

$$H = \begin{cases} \theta, & \text{if } B < G \\ 360 - \theta, & \text{else} \end{cases}$$

$$\theta = \arccos \frac{2R - G - B}{2\sqrt{(R - G)^2 + (R - B)(G - B)}}$$

$$S = 1 - \frac{3}{R + G + B} \cdot \min(R, G, B)$$

$$I = \frac{1}{3}(R + G + B)$$

Lecture Chapter 9 Slide 22

# Calculating Hue

■ R:120, G: 80, B: 210

$B < G ?$

$$120 \not< 80 \Rightarrow H = 360 - \theta$$

$$H = \begin{cases} \theta, & \text{if } B < G \\ 360 - \theta, & \text{else} \end{cases}$$

$$\theta = \arccos \frac{2R - G - B}{2\sqrt{(R - G)^2 + (R - B)(G - B)}}$$

$$S = 1 - \frac{3}{R + G + B} \cdot \min(R, G, B)$$

$$I = \frac{1}{3}(R + G + B)$$

R:120, G: 80, B: 210

# Calculating Hue

$$H = 360 - \theta$$

$$\theta = \cos^{-1} \left( \frac{2R - G - B}{2\sqrt{(R-G)^2 + (R-B)(G-B)}} \right)$$

$$\theta = \cos^{-1} \left( \frac{240 - 80 - 210}{2\sqrt{(120-80)^2 + (120-210)(80-210)}} \right)$$

$$\theta = \cos^{-1} \left( \frac{-50}{2\sqrt{1600 + 11700}} \right)$$

$$\theta \approx \cos^{-1}(-0.2168)$$

$$\theta \approx 102.5^\circ$$

$$\Rightarrow H = 360^\circ - \theta \approx \mathbf{257.5^\circ}$$

$$H = \begin{cases} \theta, & \text{if } B < G \\ 360 - \theta, & \text{else} \end{cases}$$

$$\theta = \arccos \frac{2R - G - B}{2\sqrt{(R-G)^2 + (R-B)(G-B)}}$$

$$S = 1 - \frac{3}{R + G + B} \cdot \min(R, G, B)$$

$$I = \frac{1}{3}(R + G + B)$$

**R:120, G: 80, B: 210**

# Calculating Saturation und Intensity

$$\blacksquare I = \frac{R+G+B}{3}$$

$$\blacksquare I = \frac{410}{3}$$

$$\blacksquare I \approx 136.7$$

$$\blacksquare S = 1 - \frac{3}{R+G+B} \cdot \min(R, G, B)$$

$$\blacksquare S = 1 - \frac{3}{120+80+210} \cdot 80$$

$$\blacksquare S = 1 - \frac{240}{410}$$

$$\blacksquare S \approx 0.415$$

$$H = \begin{cases} \theta, & \text{if } B < G \\ 360 - \theta, & \text{else} \end{cases}$$

$$\theta = \arccos \frac{2R - G - B}{2\sqrt{(R - G)^2 + (R - B)(G - B)}}$$

$$S = 1 - \frac{3}{R + G + B} \cdot \min(R, G, B)$$

$$I = \frac{1}{3}(R + G + B)$$

R:120, G: 80, B: 210

Color in HIS:

H: 257.5°, S: 0.415 , I: 136.7

# Calculating Hue

■ R:0, G: 150, B: 130

$B <$

$130 < 150$

# Calculating Hue

$$H = \theta$$

$$\theta = \cos^{-1}\left(\frac{2R - G - B}{2\sqrt{(R-G)^2 + (R-B)(G-B)}}\right)$$

$$\theta = \cos^{-1}\left(\frac{-150 - 130}{2\sqrt{(-150)^2 + (0 - 130)(150 - 130)}}\right)$$

$$\theta = \cos^{-1}\left(\frac{-280}{2\sqrt{22500 - 2600}}\right)$$

$$\theta \approx \cos^{-1}(-0.9924)$$

$$\theta \approx 172.9^\circ$$

$$\rightarrow H = \theta \approx 172.9^\circ$$

$$H = \begin{cases} \theta, & \text{falls } B < G \\ 360 - \theta, & \text{sonst} \end{cases}$$

$$\theta = \arccos \frac{2R - G - B}{2\sqrt{(R-G)^2 + (R-B)(G-B)}}$$

$$S = 1 - \frac{3}{R + G + B} \cdot \min(R, G, B)$$

$$I = \frac{1}{3}(R + G + B)$$

R:0, G:150, B:130

# Saturation und Intensity

$$\blacksquare I = \frac{R+G+B}{3}$$

$$\blacksquare I = \frac{280}{3}$$

$$\blacksquare I \approx 93.3$$

$$\blacksquare S = 1 - \frac{3}{R+G+B} \min(R, G, B)$$

$$\blacksquare S = 1$$

$$H = \begin{cases} \theta, & \text{falls } B < G \\ 360 - \theta, & \text{sonst} \end{cases}$$

$$\theta = \arccos \frac{2R - G - B}{2\sqrt{(R - G)^2 + (R - B)(G - B)}}$$

$$S = 1 - \frac{3}{R + G + B} \cdot \min(R, G, B)$$

$$I = \frac{1}{3}(R + G + B)$$

R:0, G: 150, B: 130

Color in HIS:

H: 257.5°, S: 1 , I: 93.3

# Color Value Changes

A robot observes at a pack of cereal in a windowless laboratory. Someone turns the light a little brighter.

1. Do the R, G or B values of the cereal package change?
2. Do the H, S or I values of the cereal package change?

R, G and B change evenly, i.e. increase or decrease by the same factor.

H and S remain unchanged, I changes according to the change in brightness.

# Color Value Changes

The robot observes the pack in a kitchen with windows. Outside, a cloud pushes in front of the sun.

1. Do the R, G or B values of the cereal package change?
2. Do the H, S or I values of the cereal package change?

As not only the light intensity but also the color spectrum of the light changes here, all values, including H and S, change - although in most cases significantly less than the RGB values.

Iterative Closest Point (ICP) Algorithm

## Task 2

- Given a pinhole camera in positive position with focal length  $f = 20$  mm
  - You use it to photograph a building from a distance of 350 m. In the picture, the building is 0.8 mm high. How high is the actual building?
  - You are taking a photo of Cologne Cathedral, which is known to be  $100\frac{\pi}{2}$  m high, from the opposite bank of the Rhine from a distance of 800 m. In your photo, the cathedral is 314 pixels high. How many pixels per millimeter does the camera have?

# Camera Model

- Given a pinhole camera in positive position with focal length  $f = 20$  mm

$$\begin{pmatrix} u \\ v \end{pmatrix} = \frac{f}{z} \begin{pmatrix} x \\ y \end{pmatrix}$$

Lecture Chapter 9 Slide 36

# Camera Model

You use it to photograph a building from a distance of 350 m. In the image, the building is 0.8 mm high. How high is the actual building?

$$\begin{pmatrix} u \\ v \end{pmatrix} = \frac{f}{z} \begin{pmatrix} x \\ y \end{pmatrix}$$

- $v = \frac{f}{z} y$

- $y = v \frac{z}{f}$

- $y = 0.8 \text{ mm} \cdot \frac{350 \text{ m}}{20 \text{ mm}}$

- $y = 0.8 \cdot \frac{350}{20} \text{ m}$

- $y = 0.4 \cdot 35 \text{ m} = 14 \text{ m}$

# Camera Model

You are taking a photo of Cologne Cathedral, which is known to be  $100\frac{\pi}{2}$  m high, from the opposite bank of the Rhine from a distance of 800 m. In your photo, the cathedral is 314 pixels high. How many pixels per millimeter does the camera have?

$$\begin{pmatrix} u \\ v \end{pmatrix} = \frac{f}{z} \begin{pmatrix} x \\ y \end{pmatrix}$$

# Camera Model

You are taking a photo of Cologne Cathedral, which is known to be  $100 \frac{\pi}{2}$  m high, from the opposite bank of the Rhine from a distance of 800 m. In your photo, the cathedral is 314 pixels high. How many pixels per millimeter does the camera have?

- $y = 100 \cdot \frac{\pi}{2} \text{ m} \approx 157 \text{ m}, z = 800 \text{ m}, v$  corresponds to 314 px

- $v = \frac{f}{z} y = \frac{20 \text{ mm}}{800 \text{ m}} 100 \cdot \frac{\pi}{2} \text{ m} = \frac{100 \pi}{80} \text{ mm}$

- $314 \text{ px} \triangleq \frac{314}{80} \text{ mm}$

- $1 \text{ px} \triangleq \frac{1}{80} \text{ mm}$

- $80 \text{ px} \triangleq 1 \text{ mm}$

- The camera has  $80 \frac{\text{px}}{\text{mm}}$

$$\begin{pmatrix} u \\ v \end{pmatrix} = \frac{f}{z} \begin{pmatrix} x \\ y \end{pmatrix}$$

- As a camera spec this is also often denoted as inverse value:

- Pixel pitch  $\frac{1}{80 \text{ px/mm}} = 12,5 \mu\text{m}$

# Filtering – Prewitt

## Lecture Chapter 9 Slide 83

■ **Prewitt-X Filter**  $P_x = \frac{\partial g(x,y)}{\partial x}$

■ Approximated by  $p_x = \begin{pmatrix} -1 & 0 & 1 \\ -1 & 0 & 1 \\ -1 & 0 & 1 \end{pmatrix}$

■ **Prewitt-Y Filter**  $P_y = \frac{\partial g(x,y)}{\partial y}$

■ Approximated by  $p_y = \begin{pmatrix} -1 & -1 & -1 \\ 0 & 0 & 0 \\ 1 & 1 & 1 \end{pmatrix}$

■ **Properties:**

- Good results for the detections of **vertical or horizontal edges**

# Prewitt Filter

Given the following gray-scale image  $B$

$$B = \begin{pmatrix} 20 & 20 & 20 & 20 & 40 & 40 & 40 & 40 & 30 & 30 & 30 \\ 20 & 20 & 20 & 20 & 40 & 40 & 40 & 40 & 30 & 30 & 30 \\ 20 & 20 & 20 & 20 & 40 & 40 & 40 & 40 & 30 & 30 & 30 \\ 50 & 50 & 50 & 50 & 50 & 50 & 50 & 50 & 20 & 20 & 20 \\ 20 & 50 & 50 & 50 & 50 & 50 & 50 & 50 & 20 & 20 & 20 \\ 20 & 20 & 50 & 50 & 50 & 50 & 50 & 50 & 20 & 20 & 20 \\ 20 & 20 & 20 & 50 & 50 & 50 & 50 & 50 & 20 & 20 & 20 \end{pmatrix}$$

- Calculate the result of filtering  $B$  with a Prewitt-X Filter
- Calculate the result of filtering  $B$  with a Prewitt-Y Filter

# Application of a Filter

$$\begin{array}{|c|c|c|} \hline w(x,y) \\ \hline -1 & 0 & 1 \\ \hline -2 & 0 & 2 \\ \hline -1 & 0 & 1 \\ \hline \end{array} * \begin{array}{|c|c|c|c|c|} \hline f(x,y) \\ \hline a & b & c & d & e \\ \hline f & g & h & i & j \\ \hline k & l & m & n & o \\ \hline p & q & r & s & t \\ \hline u & v & w & x & y \\ \hline \end{array} = \begin{array}{|c|c|c|c|c|} \hline g(x,y) \\ \hline & & & & \\ \hline & g' & h' & i' & \\ \hline & l' & m' & n' & \\ \hline & q' & r' & s' & \\ \hline & & & & \\ \hline \end{array}$$

# Filter Operations – Image Edges

## Padding

- Example: Mean filter using:

$$\frac{1}{9} \begin{pmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{pmatrix}$$

- Input image

$$\begin{pmatrix} 30 & 60 & 90 \\ 120 & 0 & 150 \\ 180 & 210 & 240 \end{pmatrix}$$

# Filter Operations – Image Edges

Constant:

$$\begin{pmatrix} 0 & 0 & 0 & 0 & 0 \\ 0 & 30 & 60 & 90 & 0 \\ 0 & 120 & 0 & 150 & 0 \\ 0 & 180 & 210 & 240 & 0 \\ 0 & 0 & 0 & 0 & 0 \end{pmatrix}$$

Result:

$$\frac{1}{9} \begin{pmatrix} 210 & 450 & 300 \\ 600 & 1080 & 750 \\ 510 & 900 & 600 \end{pmatrix}$$

# Filter Operations – Image Edges

Wrap:

$$\begin{pmatrix} 240 & 180 & 210 & 240 & 180 \\ 90 & 30 & 60 & 90 & 30 \\ 150 & 120 & 0 & 150 & 120 \\ 240 & 180 & 210 & 240 & 180 \\ 90 & 30 & 60 & 90 & 30 \end{pmatrix}$$

Result:

$$\frac{1}{9} \begin{pmatrix} 1080 & 1080 & 1080 \\ 1080 & 1080 & 1080 \\ 1080 & 1080 & 1080 \end{pmatrix}$$

# Filter Operations – Image Edges

Mirror/Clamp:

$$\begin{pmatrix} 30 & 30 & 60 & 90 & 90 \\ 30 & 30 & 60 & 90 & 90 \\ 120 & 120 & 0 & 150 & 150 \\ 180 & 180 & 210 & 240 & 240 \\ 180 & 180 & 210 & 240 & 240 \end{pmatrix}$$

Result:

$$\frac{1}{9} \begin{pmatrix} 480 & 630 & 780 \\ 930 & 1080 & 1230 \\ 1380 & 1530 & 1680 \end{pmatrix}$$

# Filter Operations – Image Edges

No padding:

$$\begin{pmatrix} 30 & 60 & 90 \\ 120 & 0 & 150 \\ 180 & 210 & 240 \end{pmatrix}$$

Result:

$$\frac{1}{9} \begin{pmatrix} X & X & X \\ X & 1080 & X \\ X & X & X \end{pmatrix}$$

# Segmentation – Threshold Filtering

- Threshold filtering to convert a grayscale image into a binary image
- Intensity of each pixel  $(u,v)$  is compared to a predefined threshold  $T$

$$Img'(u, v) = \begin{cases} 255, & \text{if } Img(u, v) > T \\ 0, & \text{else} \end{cases}$$

# Threshold Segmentation

In the image in Figure 2 an object should be detected. The image has already been converted to a greyscale image and the intensity values (0 ... 255) are denoted on the pixels. For segmentation, threshold segmentation is applied with a threshold of  $T = 51$ .

- ...
- $Img(2,1) = 181 \rightarrow Img'(2,1) = 255$
- $Img(2,2) = 219 \rightarrow Img'(2,2) = 255$
- $Img(2,3) = 23 \rightarrow Img'(2,3) = 0$

## Extra Question

As per our definition, what is the object that was segmented in the image?

- Emoji?
- Background?

Depends on the definition of segmentation

Here: 255, if  $Img(u, v) > T$

→ Background was segmented

# Masking

How can the color information of the segmented object be preserved after segmentation.

- Use the segmented image as mask for the original image.
  - Use the original image value for all segmented as 255

Iterative Closest Point (ICP) Algorithm

# Iterative Closest Point

- **Iterative Closest Point** (ICP) is a common algorithm for registering two sets  $A, B$  with a priori unknown assignment (Besl and McKay, 1992)
- **Example: Registration of two 3D point clouds**
  - For each iteration  $k$ :
    - For each point  $a_i$  from  $A$ , find point  $b_i$  from  $B$  that is closest to  $a_i$
    - Calculate a transformation  $T_k$  such that  $D_k$  is minimal, e.g. with (Horn, 1987):

$$D_k = \sum_i \| a_i - T_k \cdot b_i \|^2$$

- $D_k$  combines translation and rotation
- Apply transformation  $T_k$  to all points from  $B$  (update)
- Termination:
  - Threshold for the difference ( $D_{k-1} - D_k$ ) or
  - Maximum number of iterations reached

Lecture Chapter 9 Slide 137

# Task 5

Given: Triangle  $V = (v_0, v_1, v_2)$  and point cloud  $P = (p_0, p_1, p_2)$

## Task 5

Given: Triangle  $V = (\mathbf{v}_0, \mathbf{v}_1, \mathbf{v}_2)$  and point cloud  $P = (\mathbf{p}_0, \mathbf{p}_1, \mathbf{p}_2)$

- Set up the error function  $F_T$  for the ICP algorithm
- To solve the problem the ICP-algorithm is to be applied using the steepest gradient approach. Determine the simplified error function:

$$F'_T = \|\mathbf{v}_0 - \mathbf{p}_0\|^2$$

- For the ICP algorithm from the second part of the task, specify the function that approximates  $V$  to  $P$  with a step size  $\alpha$ . Draw the first two iterations for  $\alpha = 0.25$  in Figure 3

# Error Function

- Set up the error function  $F_T$  for the ICP algorithm

# Error Function

- Set up the error function  $F_T$  for the IC

For each point  $a_i$  from  $A$ , find point  $b_i$  from

- The error function  $F_T$  with the corners point cloud  $P = (\mathbf{p}_0, \mathbf{p}_1, \mathbf{p}_2)$  yields:

$$F_T(V) = \sum_{j=0}^2$$

## Gradient of $F'_t$

To solve the problem the ICP-algorithm is to be applied using the steepest gradient approach. Determine the simplified error function:

$$F'_T = \|v_0 - p_0\|^2$$

### ■ Gradient of $F'_T$

## Gradient of $F'_t$

To solve the problem the ICP-algorithm is to be applied using the steepest gradient approach. Determine the simplified error function:

$$F'_T = \|\mathbf{v}_0 - \mathbf{p}_0\|^2$$

### ■ Gradient of $F'_T$

$$F'_T = \left( \sqrt{(v_{0,x} - p_{0,x})^2 + (v_{0,y} - p_{0,y})^2} \right)^2 = (v_{0,x} - p_{0,x})^2 + (v_{0,y} - p_{0,y})^2$$

$$\nabla F'_T = \begin{pmatrix} \frac{d}{dx} F'_T \\ \frac{d}{dy} F'_T \end{pmatrix} = 2 \begin{pmatrix} v_{0,x} - p_{0,x} \\ v_{0,y} - p_{0,y} \end{pmatrix} = 2(\mathbf{v}_0 - \mathbf{p}_0)$$

## 1. + 2. Iteration

For the ICP algorithm from the second part of the task, specify the function that approximates  $V$  to  $P$  with a step size  $\alpha$ . Draw the first two iterations for  $\alpha = 0.25$  in Figure 3

# 1. + 2. Iteration

- Using the gradient  $\nabla F'_T$  and step size can be derived:

$$v_{i,n} = v$$

- This allows to approximate  $P$  by:

- $V_0 = \{(0,0)^T, (1,0)^T, (0,1)^T\}$

- $v_{0,1} = v_{0,0} - \alpha \nabla F'_T = \begin{pmatrix} 0 \\ 0 \end{pmatrix} - 0.25 \cdot 2$

- $V_1 = \{(1,1)^T, (2,1)^T, (1,2)^T\}$

- $v_{0,1} = v_{0,0} - \alpha \nabla F'_T = \begin{pmatrix} 1 \\ 1 \end{pmatrix} - 0.25 \cdot 2$

- $V_2 = \{(1.5,1.5)^T, (2.5, 1.5)^T, (1.5,2.5)^T\}$

# 1. + 2. Iteration

For the ICP algorithm from the second part of the task, specify the function that approximates  $V$  to  $P$  with a step size  $\alpha$ . Draw the first two iterations for  $\alpha = 0.25$  in Figure 3

- With the gradient  $\nabla F'_T$  below step width  $\alpha = 0.25$  the following update function can be derived:

$$\mathbf{v}_{i,n} = \mathbf{v}_{i,n-1} - \alpha \nabla F'_T$$

- This allows to approximate  $P$  as follows:

- $V_0 = \{(0,0)^T, (1,0)^T, (0,1)^T\}$
- $V_1 = \{(1,1)^T, (2,1)^T, (1,2)^T\}$
- $V_2 = \{(1.5,1.5)^T, (2.5, 1.5)^T, (1.5,2.5)^T\}$

# The first 2 Interactions

## Extra Question

■ What would happen in this task if we used  $\alpha = 1$ ?

- a) Exact solution in a single step
- b) Faster convergence but still asymptotically
- c) Oscillation around of two solutions
- d) Result diverging from solution

## Extra Question

■ What would happen in this task if we used  $\alpha = 1$ ?

- a) Exact solution in a single step
- b) Faster convergence but still asymptotically
- c) **Oscillation around of two solutions**
- d) Result diverging from solution

$$\mathbf{v}_{i,n} = \mathbf{v}_{i,n-1} - \alpha \nabla F'_T$$

$$\nabla F'_T = 2(\mathbf{v}_0 - \mathbf{p}_0)$$

# Interaktives Iterative Closest Point

- In jeder Iteration versucht ICP eine möglichst optimale Annäherung von 2 Punktwolken zu finden
- Sehr abhängig von der Qualität und der Ähnlichkeit der Punktwolken, sowie den Startbedingungen

ICP iterations = 1  
White: Original point cloud  
Red: ICP aligned point cloud

# Exam

- Credit points: 6 ECTS
- Exam in winter term 2024/2025
  - **Written exam in English (schriftlich)**
  - Date: **February 24, 2025, 08:00 – 10:00**
    - **Place will be announced in the lecture and in ILIAS**
  - Registration: **Campus-System**, <https://campus.studium.kit.edu>
  - Last registration date: **February 19, 2025**
- All information regarding lectures and exams will also be published on our homepage: <https://www.humanoids.kit.edu>

# Exam – 120 minutes

- Compared to previous semesters:  
**More time** for the exam, namely **120min** instead of 60min
- Expect, for example:
  - More **in-depth** tasks, requiring a **deeper understanding and to think more**
  - Longer tasks/calculations
  - More topics covered
- No additional material
  - Only writing utensils
